

A) Calculating the location value of pharmacies at Zurich

B) Finding best places for new pharmacies at Zurich

The Value of the Location Value

The location value for pharmacies is key figure for many decision makers like pharmacy investors, pharmacy chains and the local government.

Among many factors that influence the revenue of pharmacies, the location is the most important one.

But there is no fix rule to calculate this value. The location value is important but unknown.

Data acquisition and cleaning

Locations include category names, longitude and latitude, name and address.

This information is from Foursquare.

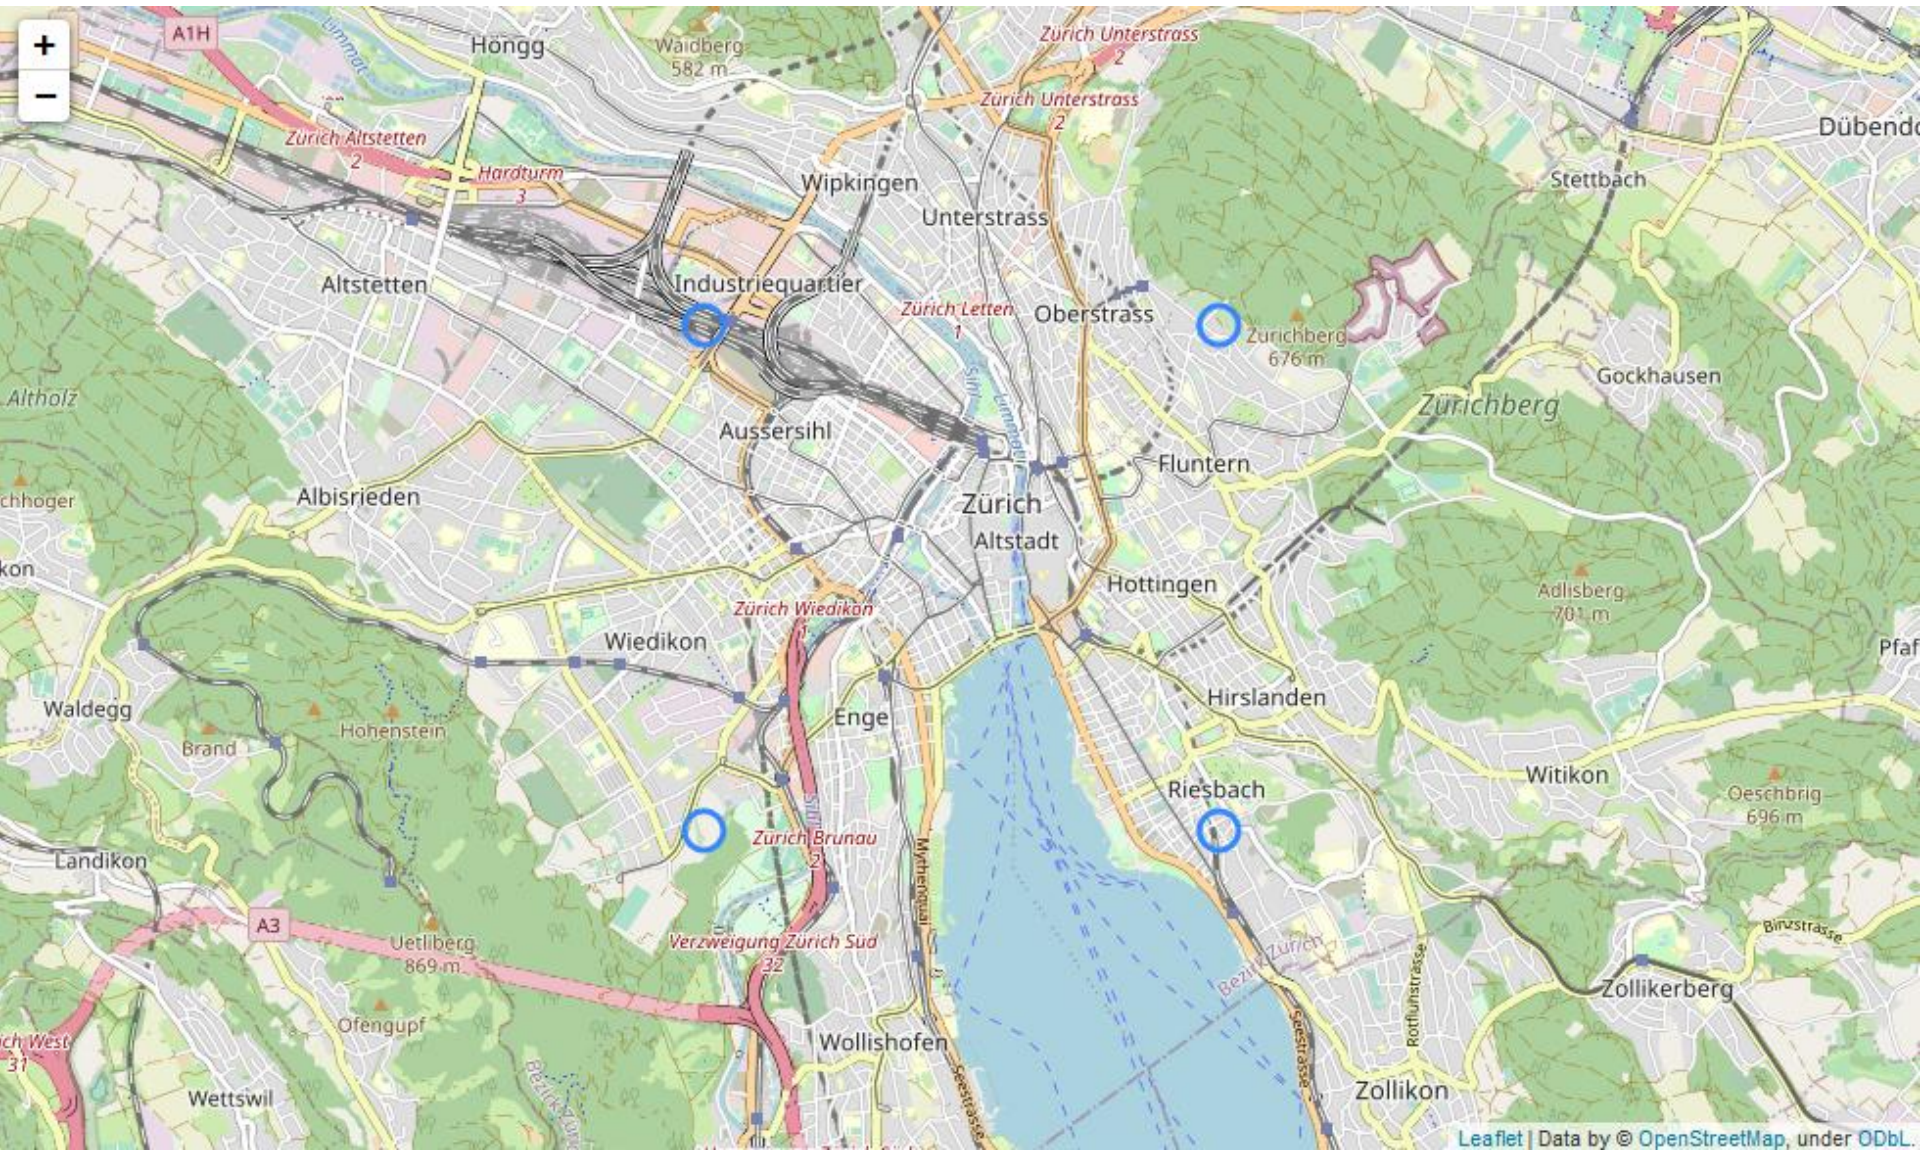

Foursquare results never have more than 50 objects.

- narrow are to search for results
- search for each category separately

Duplicate records from Foursquare were eliminated.

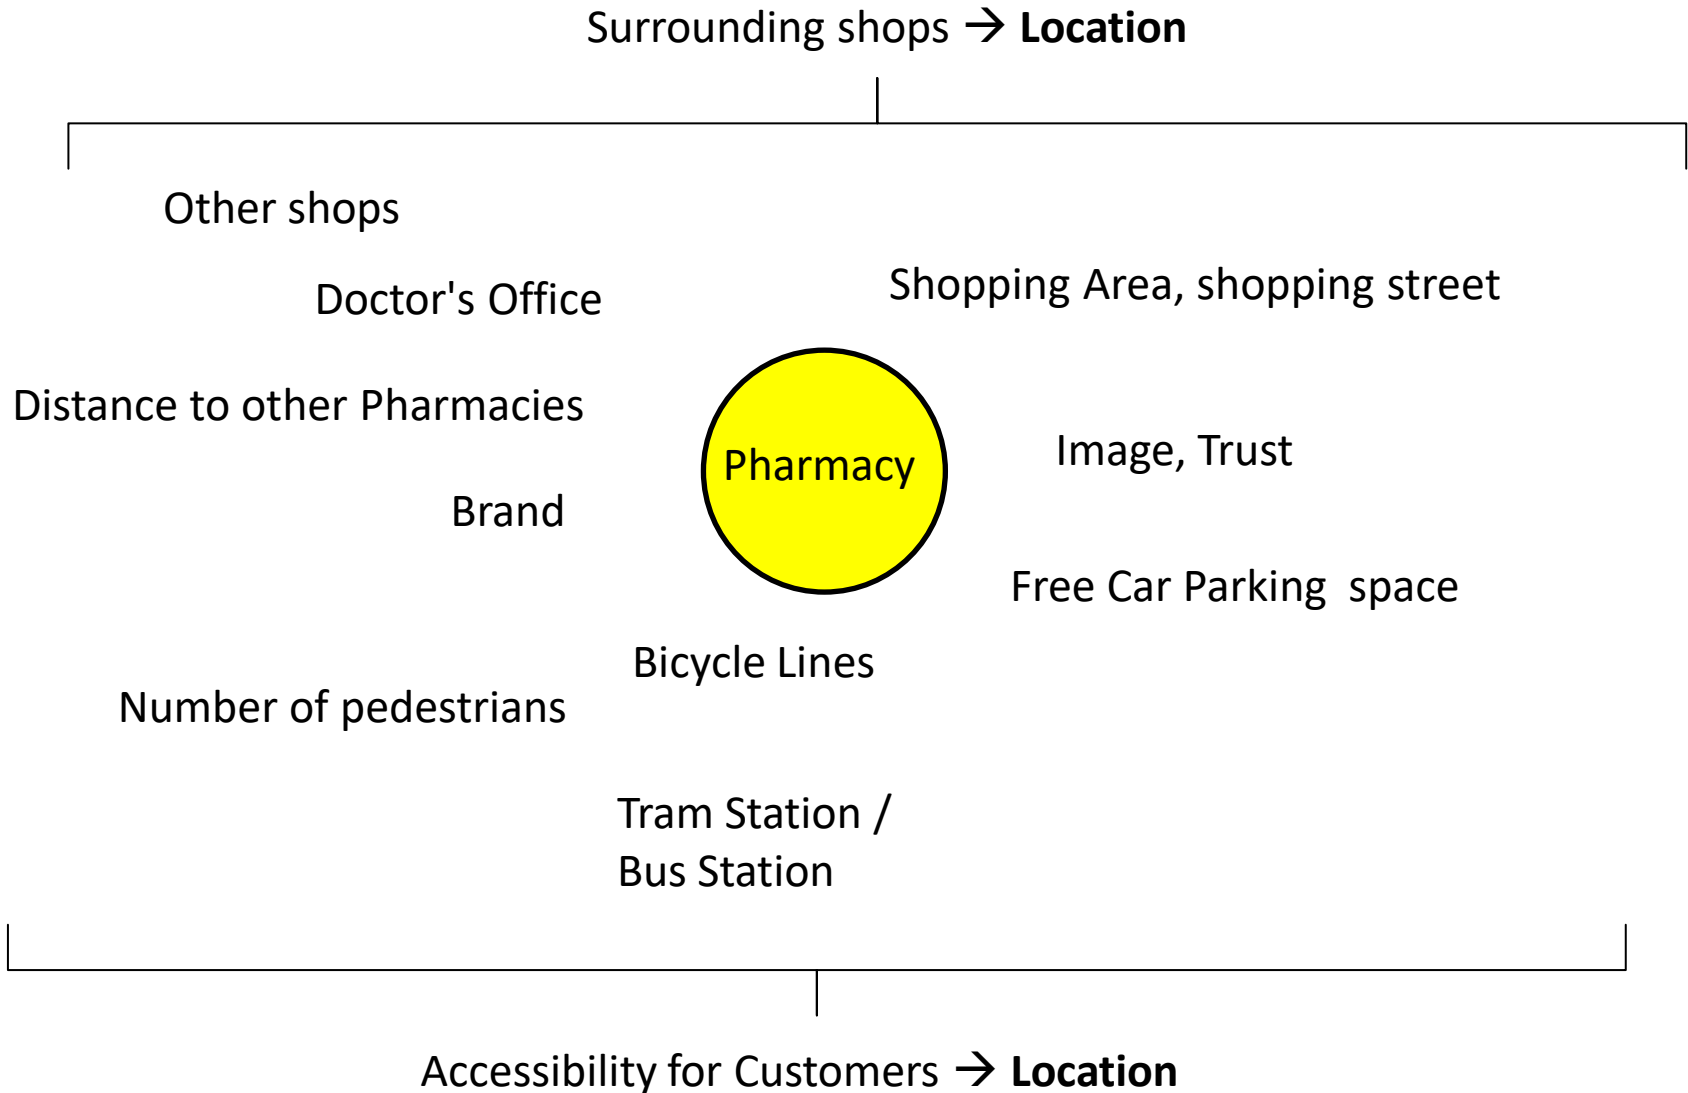

Methodology

1. Define a research area. The research rectangle is marked by four circles.

Methodology

2. Identify influences on the location value.

Methodology

3. Identify positive and negative influences

Shops that add value

- Beauty Saloons
- Doctor Offices
- Hospitals

Shops that take value

- Other Pharmacies
- Perfume Shops

What influences the location value for Pharmacies?

Accessibility for Customers → **Location**

Methodology

4. Create attribute for color

green: positive force

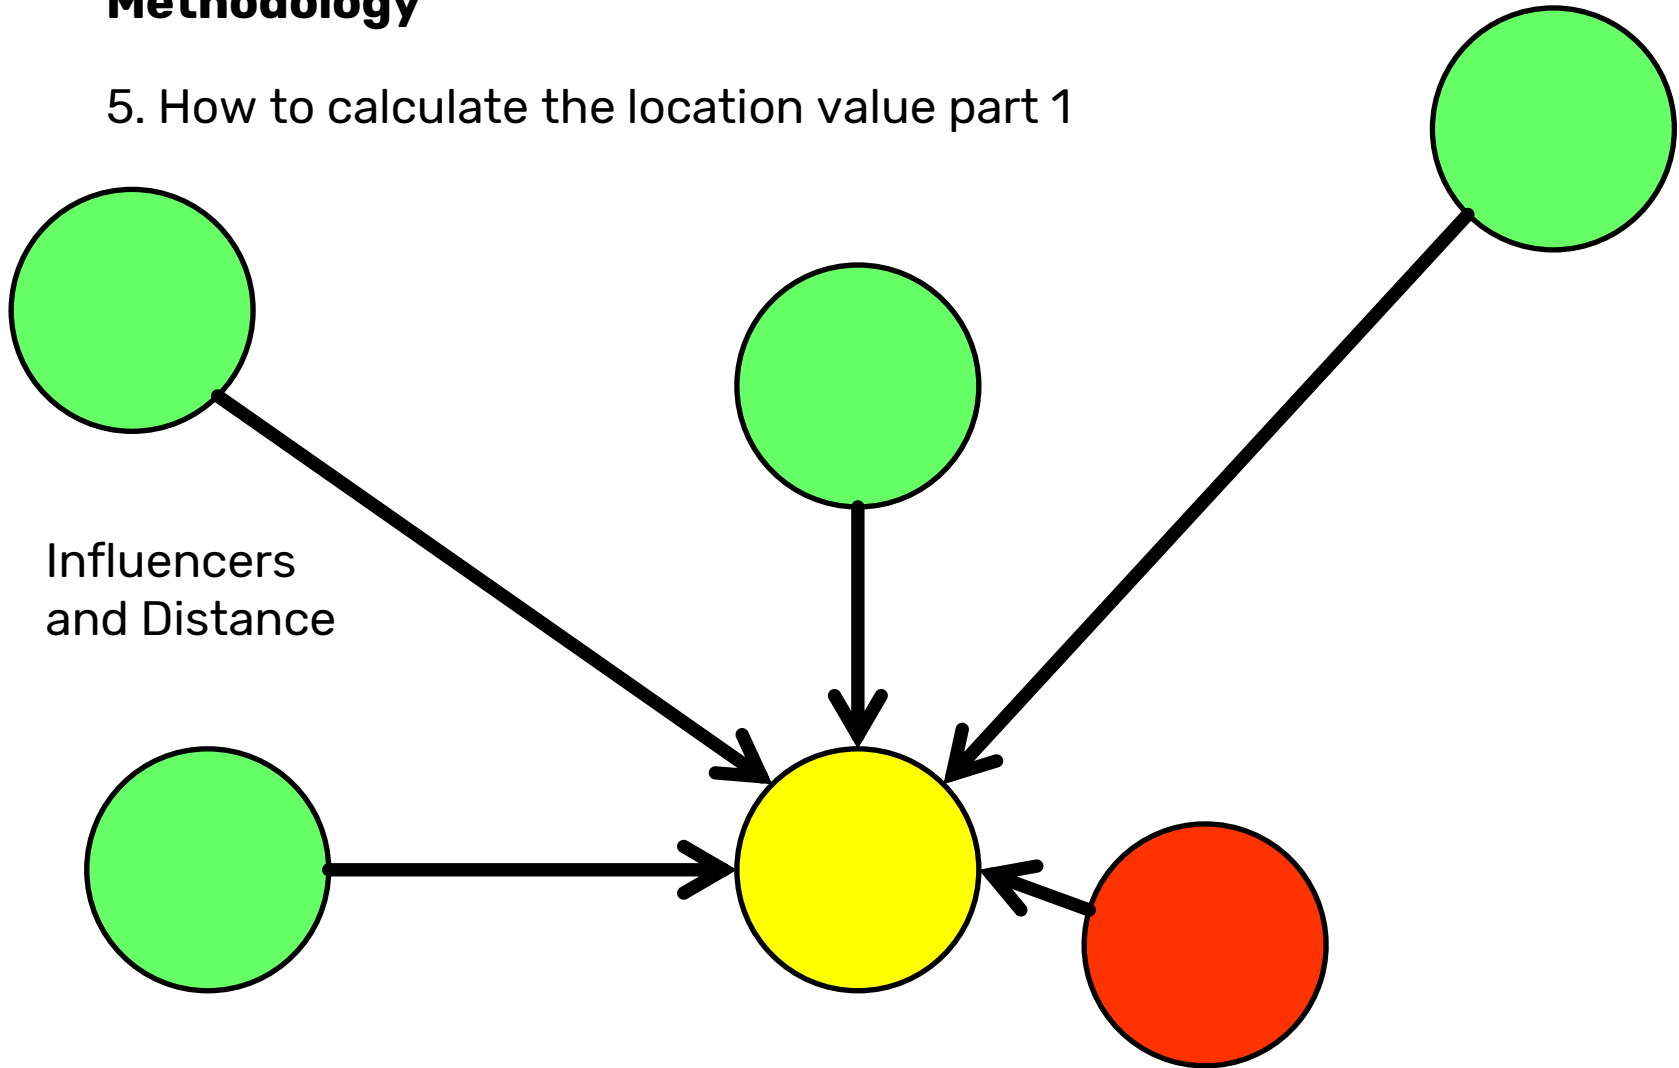

yellow: negative force, competition

red: negative force

| | categoryld | categoryname | dotcolor |
|---|--------------------------|-----------------------|----------|
| 0 | 4bf58dd8d48988d10f951735 | Pharmacy | yellow |
| 1 | 52f2ab2ebcbc57f1066b8b23 | Perfume Shop | red |
| 2 | 58daa1558bbb0b01f18ec206 | Medical Supply Store | red |
| 3 | 4bf58dd8d48988d177941735 | Doctor s Office | green |
| 4 | 54541900498ea6ccd0202697 | Health Beauty Service | green |
| 5 | 5745c2e4498e11e7bccabdbd | Drugstore | green |
| 6 | 4bf58dd8d48988d10c951735 | Cosmetics Shop | green |

Methodology

5. How to calculate the location value part 1

Is this Pharmacy in a good or bad location?

Methodology

5. How to calculate the location value part 2

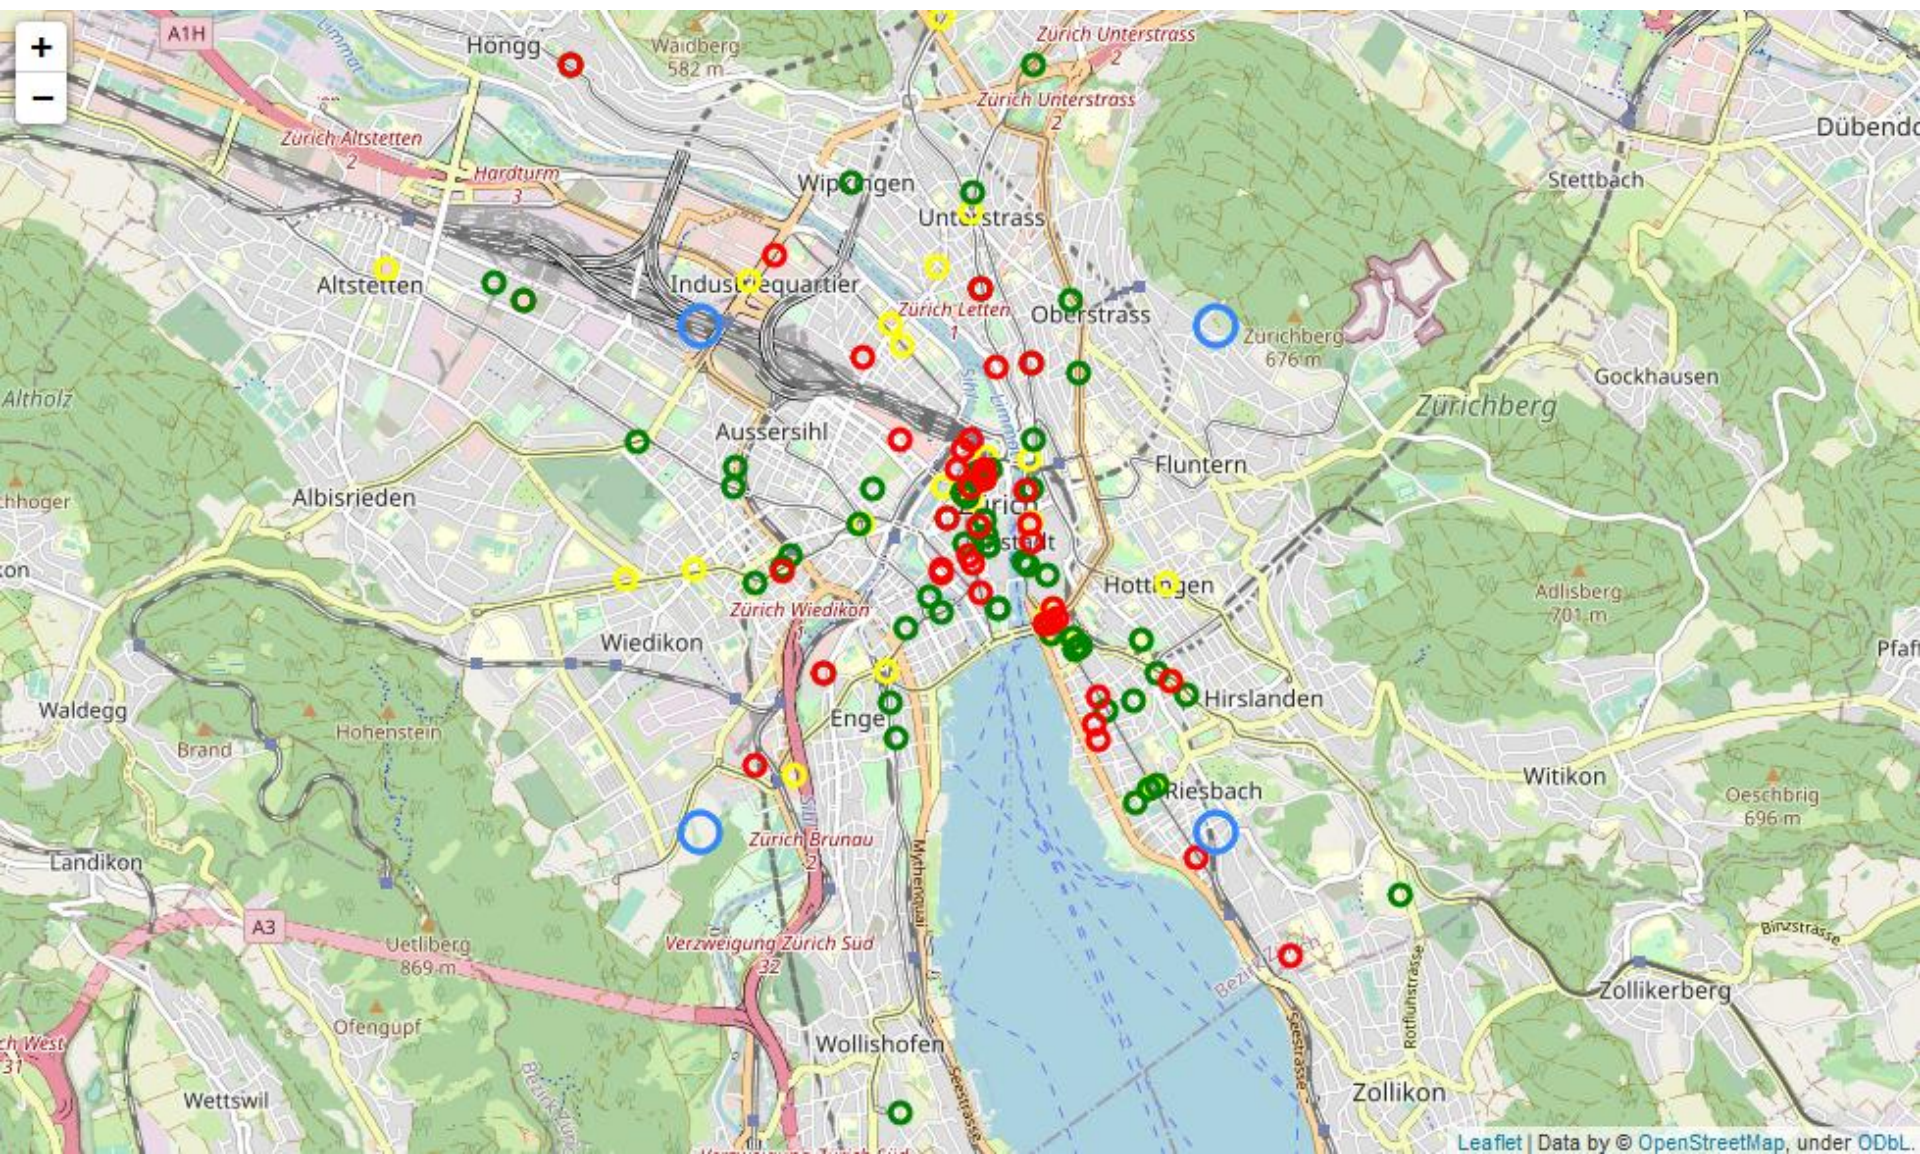

After trying Newton's Gravitation model, I decided to use a linear model.
A distance of zero has a force of 1 (or -1 in the negative case).
A distance of 400 meters or more has a force of 0

The sum of the forces is the total location value of the pharmacy.

Implementation – the situation at Zurich

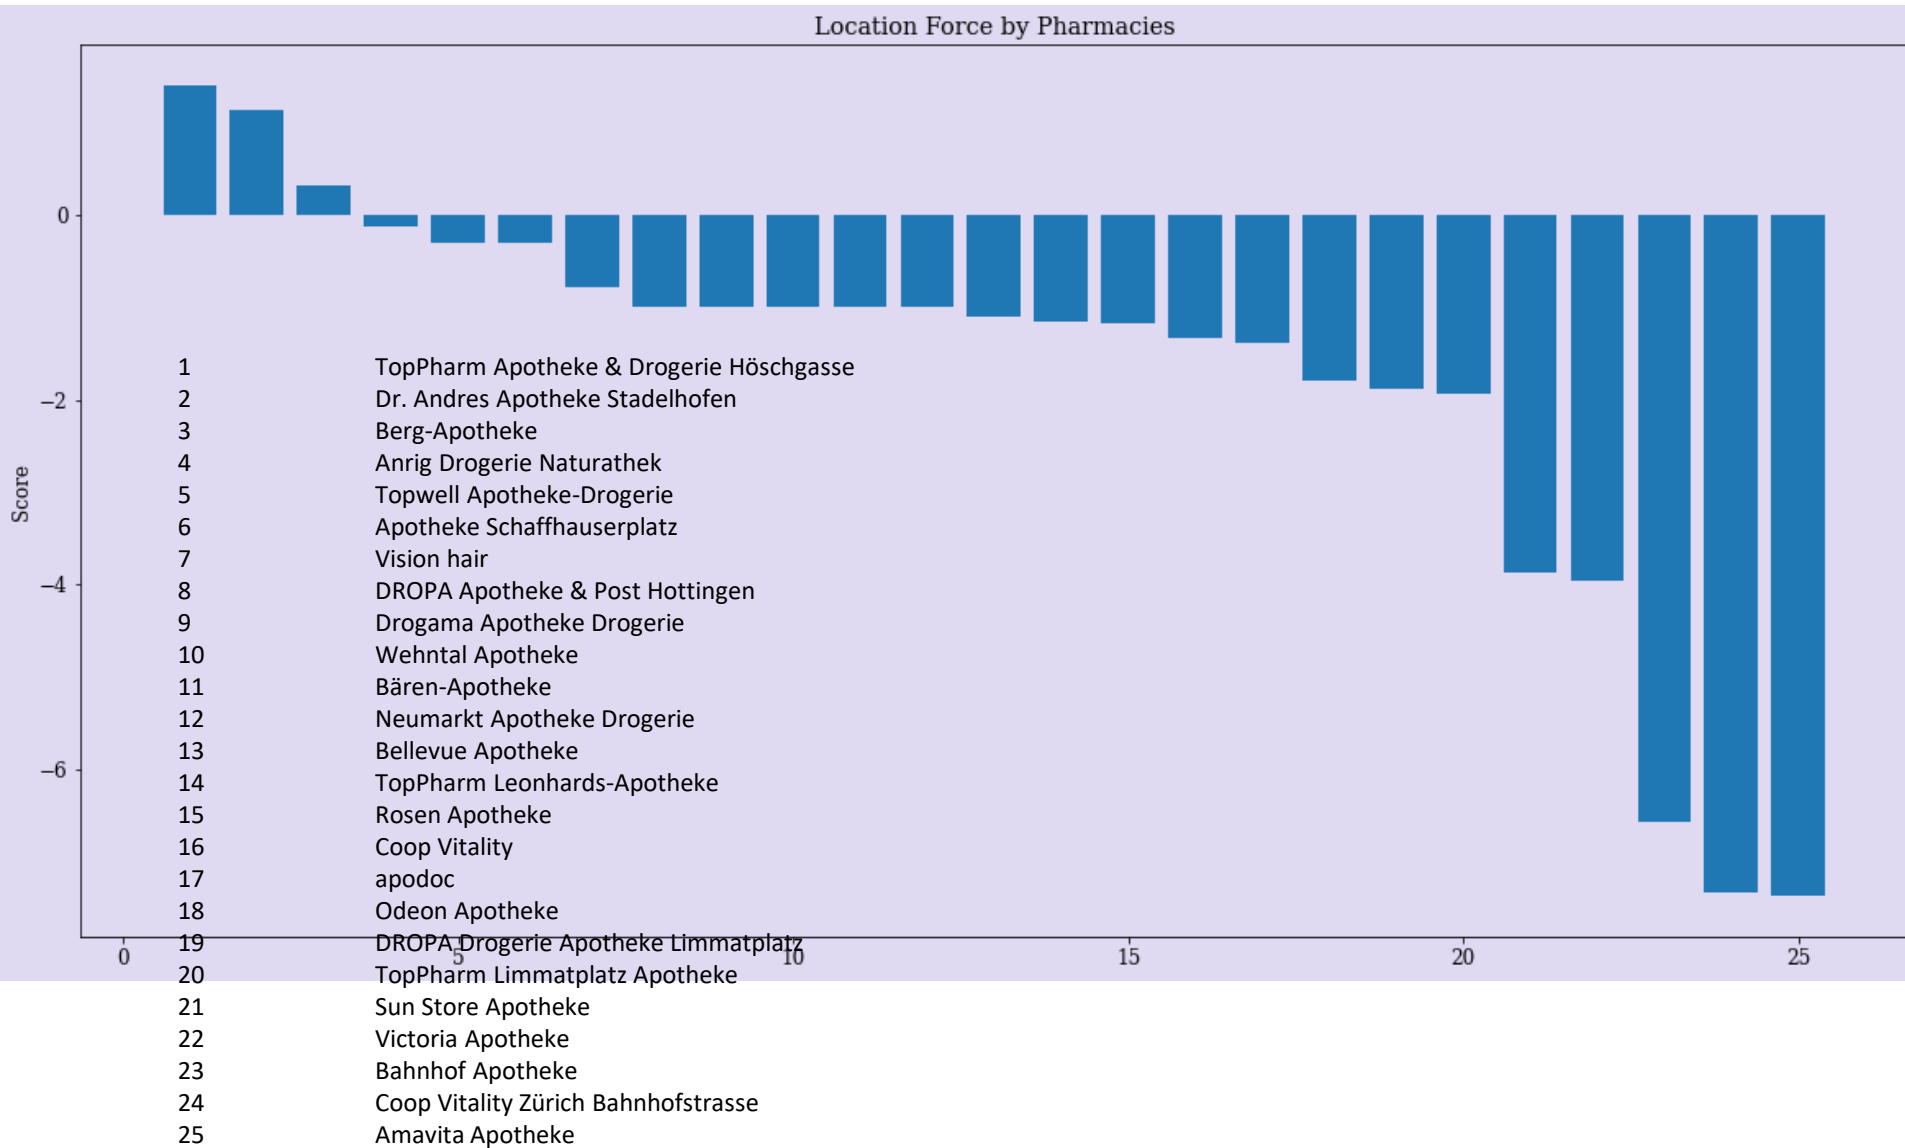

Yellow circles are existing pharmacies.

Result (A) - Location value calculated for pharmacies

| | name | address | city | categories | lat | lng | dotcolor | force |

Result (A) - visualization

Waking up the audience

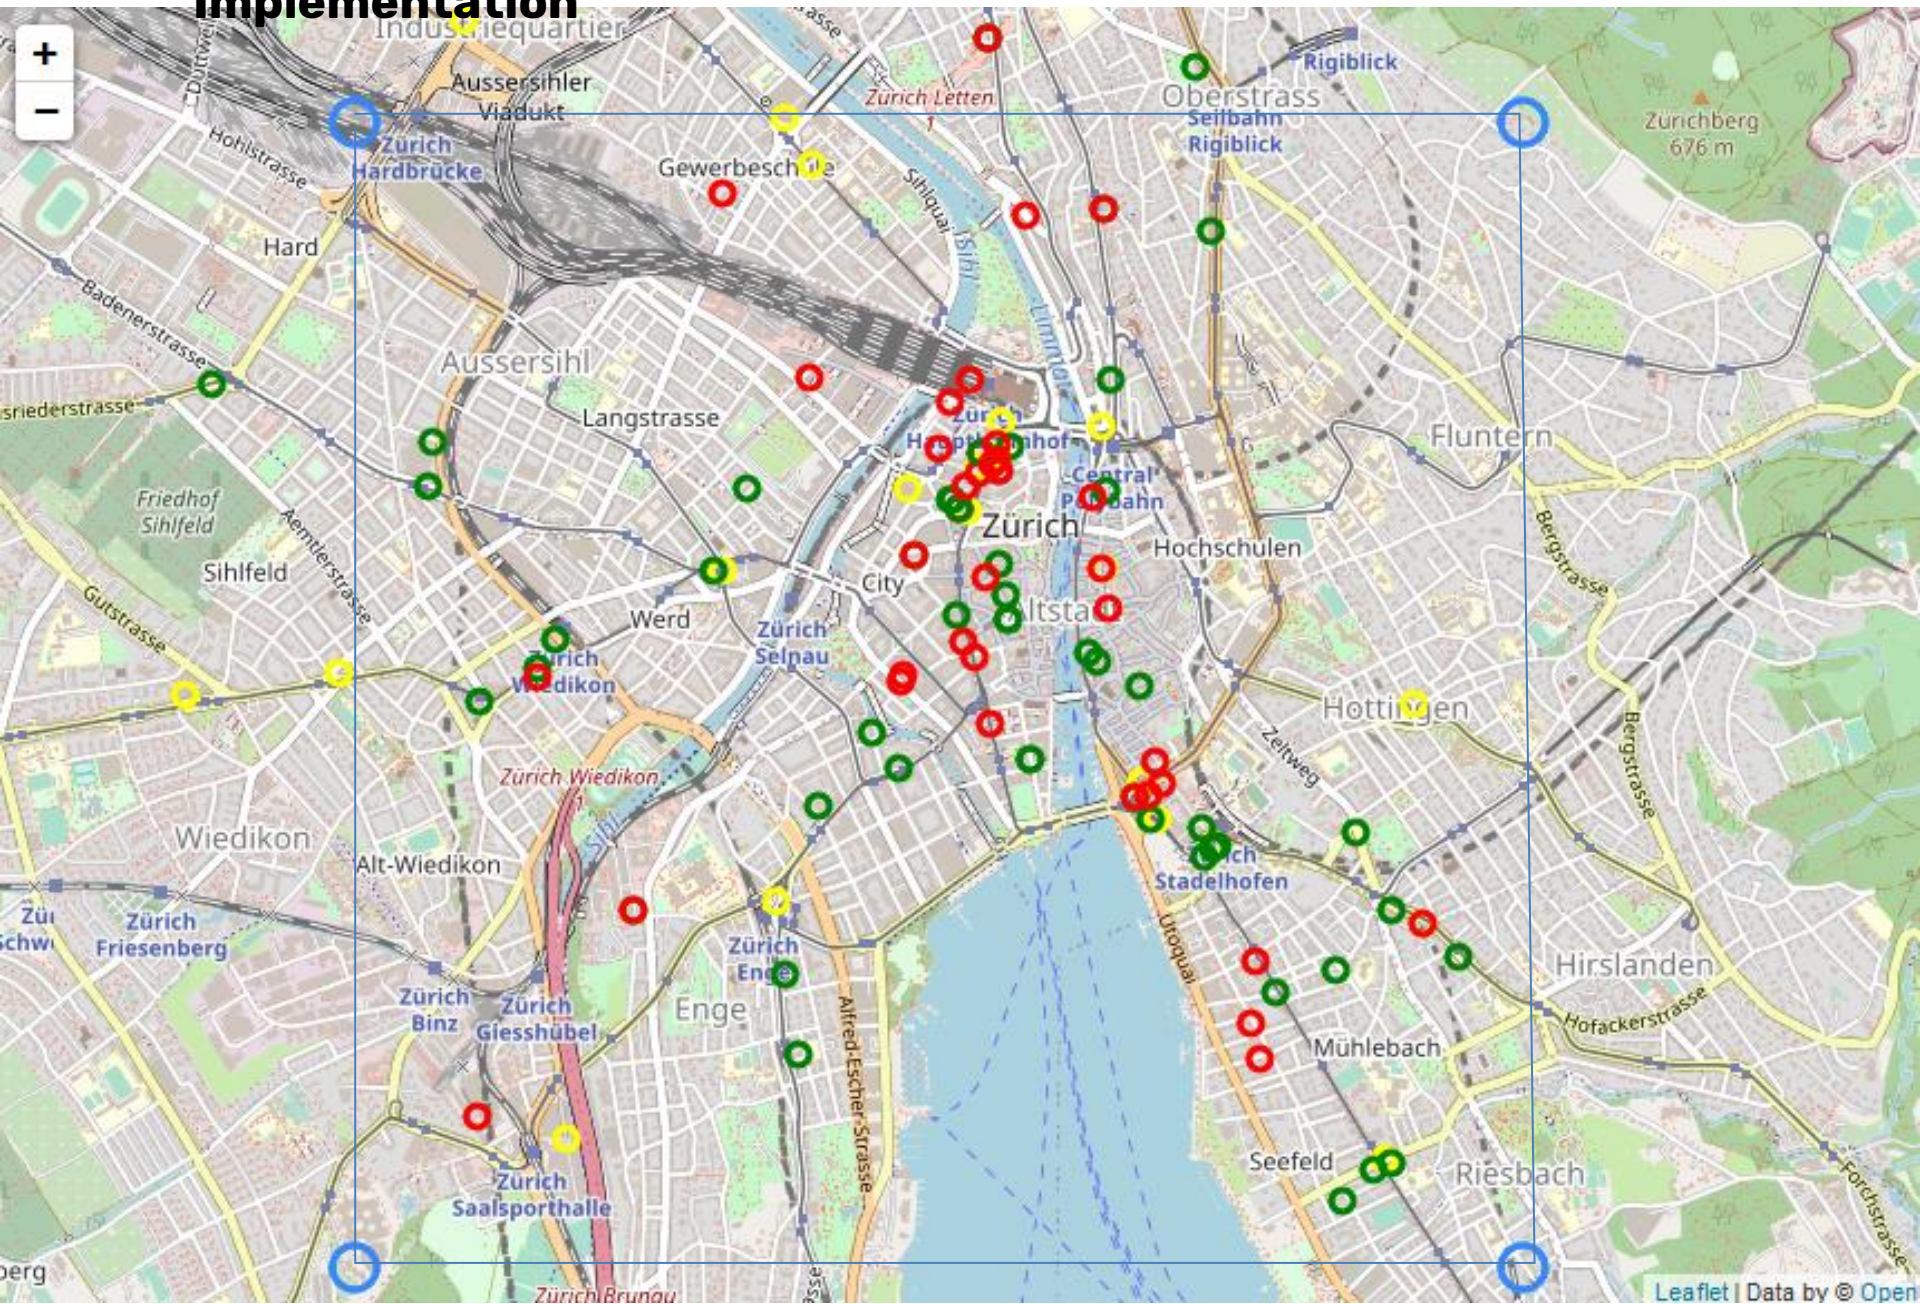

Where would you open a pharmacy at Zurich ?

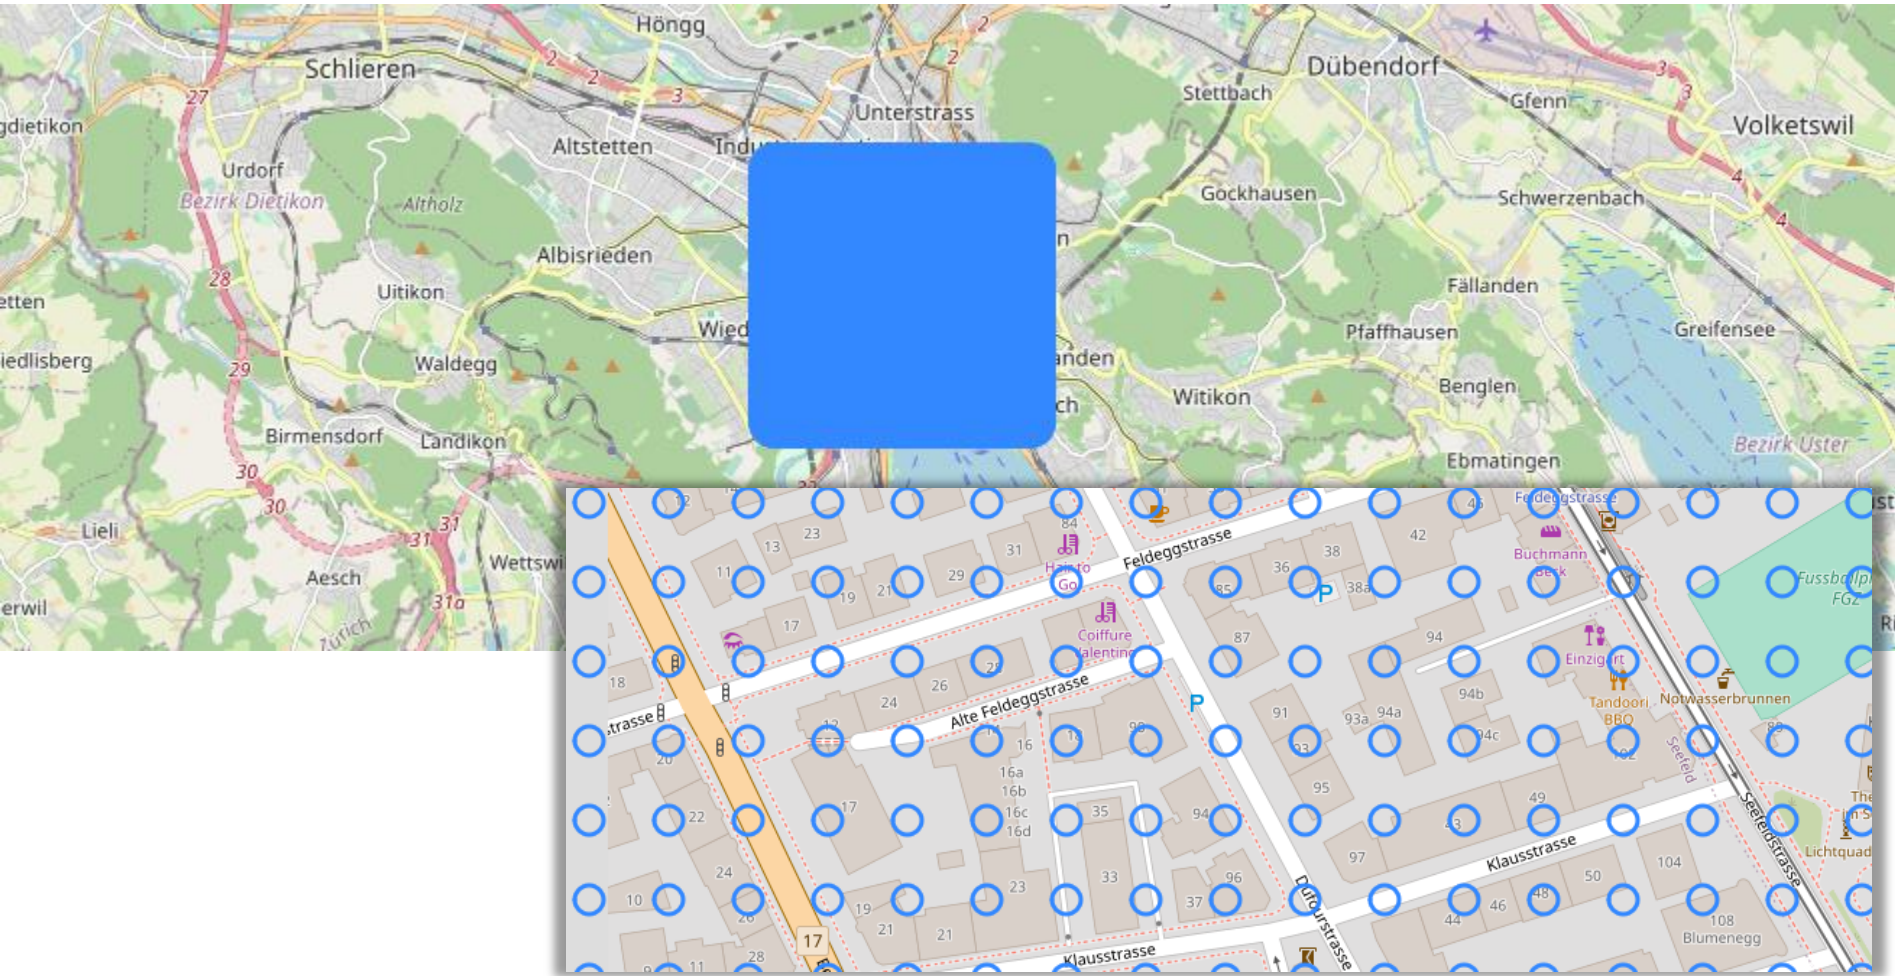

How many good areas can you identify ?

Implementation

The map illustrates the implementation of the ZVV system in Zurich. It shows the city and surrounding areas, with various locations marked by red and green circles. A blue line indicates the main route or boundary of the system. The map includes labels for major roads, landmarks, and districts.

Implementation - Grid over Zurich

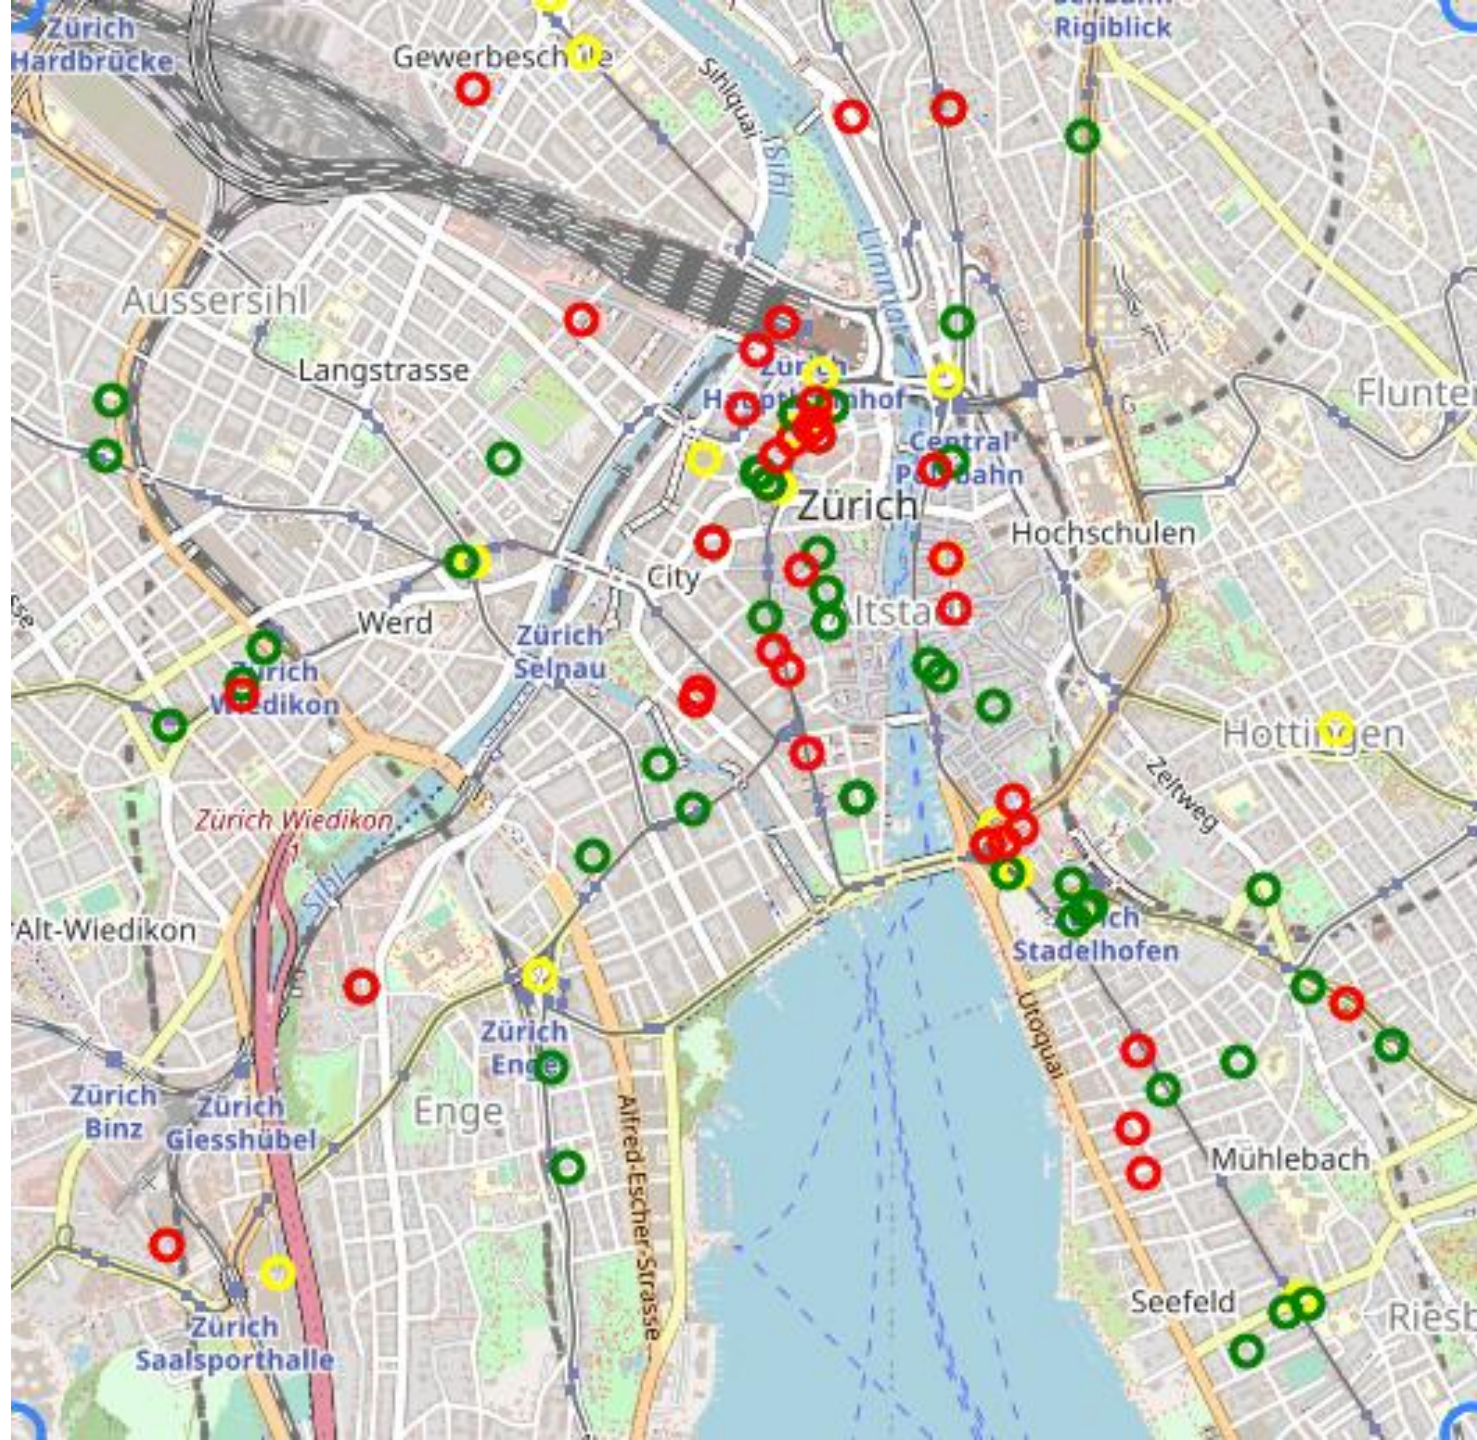

The cells in the grid have a distance of 22 meters. For each cell we calculate the force to all objects to calculate the total force for the cell.

Result - Heatmap shows the value of each cell

Did you really see them here?

Conclusions and future directions

Built a powerful model for a fully automated location analysis.

The implementation can be adapted for other locations and fields.

Important is a good cooperation between business and data scientist for selecting criteria and calculation methods.
